

2012 HAS Calendar

The following is the listing of HAS activities for 2012. Club meeting dates and the Kahala/Geiger star party dates are very predictable. The other dates are based on the Moon's cycle of 27.3 days versus the earth's 30.4, not to mention the club's scheduling on Saturdays only. The longest darkest Saturdays were selected for the members-only outing. The public star party dates were scheduled for the Saturday where either the Moon sets late or comes up near midnight.
